

## F. MARION HULETT

It is with regret that we announce the sudden passing of F. Marion Hulett on September 17, 2018 due to pancreatic cancer. She was 78 years old. Marion was a valued colleague in the BLAST community and spent 35 years at the University of Illinois-Chicago in the Biology Department. Marion's research focus was on the complex network of two-component regulatory systems in *Bacillus subtilis* that respond to phosphate starvation. Linda Kenney, Don Morrison, and Michiko Nakano are planning a gathering to celebrate her life and her work on May 31, 2019 on the UIC campus. If you are interested in attending, or if you have memories/anecdotes to share, please contact Linda ([kenneyl@uic.edu](mailto:kenneyl@uic.edu)) so that they can create a listserv with updates.
